Can aspects clean up code pollution? Logging and Performance tracing with AspectWerkz 2.0

Two introduction level tutorials on IBM developerWorks:

- Using the AspectWerkz framework for logging is a first step
  Aspects to implement a logging and performance tracing service in some sample code
- Using the AspectWerkz framework for performance tracing is a first step.
  Using AspectWerkz with the Apache Axis Web services framework.

Complete source code is available for download.

Quick Start Guide to Enterprise AOP with Aspectwerkz 2.0

A tutorial that will lead you thru a sample app using Hibernate, Spring and Tapestry.
One first version is detailled to explain the purpose of the sample app (a blog webapp). This first version is not using AOP. Another version is then detailled where crosscutting concerns such as per request logging and profiling have been refactored using AspectWerkz 2.0.

Complete source code is available for download, including SQL scripts.

Translated into spanish:
http://www.programacion.com/java/articulo/jap_aop

Performance Analysis of J2EE Applications Using AOP Techniques.

Explains how to write a simple performance analysis aspect for J2EE using AspectWerkz.

http://www.onjava.com/pub/a/onjava/2004/05/12/aop.html

Enabling AOP in WebLogic Server using the JRockit Management API.

In this article, you will learn the basic AOP concepts as well as how to apply AOP to your J2EE applications using AspectWerkz, a dynamic AOP framework. The hands-on tutorial explains how to use AOP to track EJB CMP's container generated JDBC queries.
