# Downloads

The downloads you need to pick depends on how you plan to use Cargo:

- If you want to integrate Cargo in your Java code, you'll need to add the following jars to your classpath:
  - the `cargo-core-api-*` jars and the container implementations you wish to use (`cargo-core-container-*` jars).
  - **or** the `cargo-core-uberjar` jar which aggregates all the required jars.
- If you want to use Cargo from Ant, you'll need to pick the same jars as above in addition to the `cargo-ant` jar.
- If you want to use Cargo from Maven 2 or Maven 3, you don't need to install anything at all as Maven will automatically download the required jars when you first use the plugin.
- If you want to use the Cargo Daemon, you'll need to download the webapp, and, if you wish to use it from your Java code, the client.

## Latest stable release: version 1.4.0

| Category | Version | Artifacts | Source | Description | Release notes |
|---|---|---|---|---|---|
| **Core Uberjar** | 1.4.0 | cargo-core-uberjar | Source JAR | Convenience jar containing all the **Core API** and **Core Containers** jars | Notes |
| **Extensions** | 1.4.0 | cargo-ant | Source JAR | ANT tasks for Cargo | Notes |
| | 1.4.0 | cargo-maven2-plugin | Source JAR | Maven2/Maven3 plugin for Cargo | Notes |
| | 1.4.0 | cargo-daemon-webapp<br><br>cargo-daemon-client | Source JAR | Cargo Daemon, a Web-based application that uses the Cargo API to configure, start and stop containers on a remote machine. | Notes |

| | | | | | |
|---|---|---|---|---|---|
| **Tools** | 1.4.0 | cargo-jetty-7-and-onwards-deployer | Source JAR | The Deployer Web application for the Jetty remote containers, which must have been deployed to Jetty before using the CARGO remote deployer. Designed to work with Jetty 7.x and later (Jetty from Eclipse.org) | Notes |
| | 1.4.0 | cargo-jetty-6-and-earlier-deployer | Source JAR | The Deployer Web application for the Jetty remote containers, which must have been deployed to Jetty before using the CARGO remote deployer. Designed to work with Jetty 6.x and earlier (Jetty from Mortbay.org) | Notes |
| **Core API** | 1.4.0 | cargo-core-api-util | Source JAR | Utility classes used by other core API jars | Notes |
| | 1.4.0 | cargo-core-api-module | Source JAR | API to parse/create J2EE Modules (WAR, EAR, etc) | Notes |
| | 1.4.0 | cargo-core-api-container | Source JAR | The main Cargo Container API and all associated object | Notes |

| | | | | | |
|---|---|---|---|---|---|
| | 1.4.0 | cargo-core-api-generic | Source JAR | Generic API wrapping the main Cargo Container API | Notes |
| **Core Containers** | 1.4.0 | cargo-core-container-geronimo | Source JAR | Geronimo implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-glassfish | Source JAR | Glassfish implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-jboss | Source JAR | JBoss implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-jetty | Source JAR | Jetty implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-jo | Source JAR | jo! implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-jonas | Source JAR | JOnAS implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-jrun | Source JAR | JRun implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-orion | Source JAR | Orion implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-resin | Source JAR | Resin implementation of the Core Container API | Notes |

| | | | | | |
|---|---|---|---|---|---|
| | 1.4.0 | cargo-core-container-tomcat | Source JAR | Tomcat implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-weblogic | Source JAR | WebLogic implementation of the Core Container API | Notes |
| | 1.4.0 | cargo-core-container-websphere | Source JAR | WebSphere implementation of the Core Container API | Notes |

## Documentation

Documentation for Cargo 1.4.0 can be found here.

## Continuous Builds

Cargo is using Codehaus Bamboo to build Cargo whenever there's a commit. This allows us to ensure that the Cargo build works at all times. As a side effect, this also means that you can grab the latest Cargo artifacts from Bamboo.

You can download these artifacts from Bamboo's repository: http://bamboo.ci.codehaus.org/browse/CARGO

You can also download artifacts of a specific build:

- Go to the CARGO trunk build history.
- Click on the build you're interested in.
- Click on "Artifacts" tab. You'll be presented with a list of artifacts built during the last build. Grab the one you need.

## Older versions

Older downloads can be found in the Archived Downloads section.
