

Contact

The Geotools project has two principal forms of communication.

- [#Mailing Lists](#)
- [#Internet Relay Chat](#)

Mailing Lists

For additional options on contacting the GeoTools Community please see our user guide for [communication and support](#).

geotools-gt2-users

[Subscribe](#) | [Archives on SF](#) | [Recent archives](#)

The users list is for questions regarding the installation or use of the GeoTools2 library. Users of GeoTools2 are usually java developers building applications with spatial capabilities.

Sometimes, some small applications or server-side code will exist within the GeoTools code base (for example, a Web Map Service implementation or a conversion utility). If these have not yet found a project of their own, then questions about how to use them may be directed to this list.

geotools-devel

[Subscribe](#) | [Older archives on SF](#) | [Recent archives](#)

The developer list is used by the development team of GeoTools2 solely to discuss development issues. The list is exclusively for:

1. current members of the GeoTools2 development team.
2. those who are interested in joining the GeoTools2 development effort.
3. those who wish to follow the discussions surrounding GeoTools2 development.

Please do not send general questions regarding the use of GeoTools2 to this list, but to geotools-gt2-users instead.

geotools-i18n

[Subscribe](#) | [Archives on SF](#) | [Recent archives](#)

The i18n list is meant to discuss making the GeoTools project available in languages other than English. This includes the website, the developers' guide and actual GeoTools GUI modules.

geotools-commits

[Subscribe](#) | [Archives on SF](#) | [Recent archives](#)

A read only list to which all SVN (was CVS) commit statements are posted.

geotools-discussion

[Subscribe](#) | [Archives on SF](#) | [Recent archives](#)

This list is dedicated to users of an older version of GeoTools known as GT1 or geotools-lite.

Please do not ask questions related to versions of GeoTools 2.0 or higher on this list.

Internet Relay Chat

Joining the IRC channel

If you are new to IRC, you will need to find an IRC client. The later versions of Netscape and Mozilla have IRC built in, and you can connect to a GeoTools meeting simply by using the URL: <irc://irc.freenode.net/geotools>.

The information you need to configure your IRC client are:

- Server - Pick one from Freenode Servers
- Channel - #geotools
- Port - 6667

You can jump on IRC at any point to meet the GeoTools team, or ask questions of other users.

Weekly Meeting

GeoTools developers meet regularly to discuss issues such as design. Meeting times are announced on the geotools-devel mailing list.

At the time of writing, developers meet weekly at 20:00 Monday UTC:

Zone	City	24 hour	12 hour
UTC 2 CEST	Rome	18:30	6:30 pm
UTC 0	London	16:30	4:30 pm
UTC -4	New York	12:30	12:30 pm
UTC -7 PDT	Vancouver:	09:30	9:30 am

To figure out the time in your area try the following:

- <http://www.timeanddate.com/worldclock/fixetime.html?year=2008&month=7&day=28&hour=16&min=30&sec=0>
