Continuous Integration

Having automated continuous integration builds is definitely a good thing. So, quite naturally, Gant has some.

There is a Buildbot server provided by Concertant LLP:

URL	http://www.concertant.com:8001
Build server	Buildbot 0.7.5
Operating systems	Ubuntu 7.10 (JDK 1.6), Mac OS X 10.4 (JDK 1.5), Solaris 10 11/06 (JDK 1.6)
Repository modification check	Every 60 minutes
Repository quiet period	2 minutes

There is a Bamboo build at Codehaus:

URL	http://bamboo.ci.codehaus.org/browse/GANT-TRUNK
Build server	Atlassian Bamboo
Operating system	Unknown (JDK1.6)
Repository modification check	Every 10 minutes

There is a CruiseControl build at Canoo:

URL	http://build.canoo.com/gant/
Build server	CruiseControl
Operating system	Unknown (JDK1.6)
Repository modification check	Every 60 minutes

None of the servers store artifacts as yet. The Canoo server tags the builds it makes in the Gant repository.
