

How To Run

Of course you can always compile your code to an .exe and run it as any other CLI program. But this section is all about running boo programs directly from memory.

booi utility

```
booi examples/HelloWorld.boo
```

To execute a script read directly from stdin:

```
booi -
```

booc utility

boo nant task

```
<boo>  
print("Hello from nant task!")  
</boo>
```

Boo.Lang.compiler API

```
import Boo.Lang.Compiler  
import Boo.Lang.Compiler.IO  
import Boo.Lang.Compiler.Pipelines  
  
compiler = BooCompiler()  
compiler.Parameters.Input.Add(StringInput("<script>", "print('Hello!')"))  
compiler.Parameters.Pipeline = Run()  
  
compiler.Run()
```
