

# Mercury Wagon

- [Design](#)
- [Additional information](#)
- [Overview](#)

## Design

Mercury wagon is a drop-in replacement for http, https and dav wagon implementations. Design is very simple and straightforward: MercuryWagon class translates all the wagon API calls into Mercury Transport requests.

## Additional information

### Overview

Mercury wagon also tracked in [MERCURY-8](#) and it's subtasks

Some additional information could be viewed in [HowTo wagon](#), in particular - how to configure PGP signature feature on it.
