

CARGO 1.2.2 available!

Dear CARGO enthusiasts

After about 7 weeks after the last release, I decided we have enough changes and fixed bugs in order to go ahead with CARGO 1.2.2. As for what's new, the list is this time small (12 entries):

Improvements and new features (5)

- Jetty containers now support datasources ([CARGO-1107](#))
- Jetty 7.x standalone local container is now the default container for the CARGO Maven2/Maven3 plugin ([CARGO-1106](#)) and downloads its container via the artifactInstaller
- The usage of an external jetty-env.xml file has finally been documented ([CARGO-861](#))
- The XML/properties replacement engine can now WARN when a replacement is not possible (instead of failing) ([CARGO-1099](#))
- Deployers (and mostly undeployers) can now intelligently ignore failures when deploy/undeploy fails (for example, if the application is not deployed but one attempts to undeploy it) ([CARGO-1100](#))

Bug fixes (7)

- Proxies that would be previously set by Maven are not used during deployment anymore ([CARGO-1042](#))
- Module names in JBoss do not contain any periods anymore -allowing the deployment of datasources via Maven2/Maven3 plugin ([CARGO-1091](#))
- Logging level is now interpreted properly for containers that output their messages on stderr ([CARGO-1095](#))
- Jetty can deploy to root (/) context ([CARGO-1103](#))
- cargo.jboss.invoker.pool.port configuration property works properly for JBoss 5+ ([CARGO-1104](#))
- Merging of XML files doesn't throw a ConcurrentModificationException anymore ([CARGO-1105](#))
- JVM properties on Glassfish now work ([CARGO-1108](#))

In addition to these, we have done various changes in the documentation as well as the Maven archetypes. For example, a profile for JBoss 7.1.x has been added to all archetypes and is configured with an artifactInstaller.

The full release notes can be found on <https://jira.codehaus.org/secure/ReleaseNote.jspa?version=18384&styleName=Html&projectId=10730>

To use this new version:

- Users of the Java API and/or the ANT tasks can download the required components (be it the uberjar, ANT tasks and others) via the [CARGO Downloads page](#).
- Users of the Maven2/Maven3 plugin simply need to change their plugin version to 1.2.2.

Please provide your feedback to the user@cargo.codehaus.org mailing list.

Enjoy!
