

# ezmlm

## Moderating messages by manually

Grep for the message you want under `/home/projects/PROJECT/lists/user/mod/pending/`

Then you can use `ezmlm-accept` to send and delete the pending message.

```
/usr/local/bin/ezmlm/ezmlm-accept ~/PROEJCT/lists/user ~/PROJECT/lists/user/mod/pending/<filename>
```

Unable to render {include} The included page could not be found.

## Allowing JIRA / Confluence to post to your list

By default, JIRA and Confluence both send emails with the "Precedence" header set to "bulk". `ezmlm-reject` automatically rejects such emails and can not be configured to do otherwise.

To resolve this, there is a script

```
/usr/local/bin/nonbulk-ezmlm-reject
```

```
#!/bin/sh
```

```
/bin/awk '/^$/{ body = 1 } { if (body || $0 !~ /^Precedence:/) { print } }' |  
/usr/local/bin/ezmlm/ezmlm-reject $*
```

This script filters out any Precedence header before it gets to `ezmlm-reject`; thus allowing such messages to be processed as normal.

In `/home/projects/PROJECT/lists/LIST/editor` change the `ezmlm-reject` line appropriately:

```
|/usr/local/bin/nonbulk-ezmlm-reject -T '/home/projects/cargo/lists/dev'  
|/usr/local/bin/ezmlm/ezmlm-gate '/home/projects/cargo/lists/dev'  
'/home/projects/cargo/lists/dev' '/home/projects/cargo/lists/dev/digest'  
'/home/projects/cargo/lists/dev/allow' '/home/projects/cargo/lists/dev/mod'  
|/usr/local/bin/ezmlm/ezmlm-clean -R '/home/projects/cargo/lists/dev' || exit 0  
|/usr/local/bin/ezmlm/ezmlm-warn '/home/projects/cargo/lists/dev' || exit 0  
|/usr/local/bin/ezmlm/ezmlm-warn -d '/home/projects/cargo/lists/dev' || exit 0  
|/usr/local/bin/ezmlm/ezmlm-tstdig -m30 -k64 -t48 '/home/projects/cargo/lists/dev' ||  
exit 99  
|/usr/local/bin/ezmlm/ezmlm-get '/home/projects/cargo/lists/dev' || exit 0
```

Possible improvements to this include adding an option to control which senders have their Precedence header removed.
