

tapestry-security 0.4.6 released!

More people using tapestry-security means more improvements, feature requests. We are still staying on top of it and keep our backlog clean with the following issues fixed in 0.4.6, the best ever tapestry-security release yet:

Bug

- [\[TYNAMO-155\]](#) - Authorization cache is not cleared at logout

Improvement

- [\[TYNAMO-143\]](#) - Create a marker annotation for SecurityConfiguration
- [\[TYNAMO-154\]](#) - add FirstExceptionStrategy as the default AuthenticationStrategy for projects with multiple realms
- [\[TYNAMO-159\]](#) - Add a NotFoundFilter
- [\[TYNAMO-160\]](#) - Handle no-context, no ending slash with the same wildcard rule
- [\[TYNAMO-161\]](#) - add a PatternMatcher field to SecurityFilterChain
- [\[TYNAMO-163\]](#) - Rename PageService to an internal LoginContextService

New Feature

- [\[TYNAMO-150\]](#) - Implement the CasFilter (new in Shiro 1.2) as a tapestry-security filter
- [\[TYNAMO-162\]](#) - provide a configuration to block access to assets (like the AssetProtectionDispatcher)

Read more at [tapestry-security guide](#) and enjoy,

Tynamo Team
