

AribaWeb 5.0 Released - Groovy Component-based Auto-AJAX

AribaWeb 5.0, the component-based UI web UI framework for creating RIA/AJAX apps without writing JavaScript, is newly available as Open Source (Apache License). AribaWeb provide the Groovy developer with:

- **Auto AJAX**: full AJAX UI from server-side Groovy code
- **Instant App**: get a full database app from your Groovy domain objects, without writing any UI
- **Live Edit & X-Ray**: Modify your layout with drag and drop, see through component hierarchy of running app
- **First Class Groovy Support**: UI components and persistent domain objects can be written in Groovy. Groovy 1.6 is embedded with full project build support for compiled Groovy, and runtime support for on-the-fly Groovy reloading.

Most of the examples are written in Groovy (Java is also supported) as can be seen in [these screencasts](#).
