

Normalize Iteration Statements

Converts things such as for loops.

For example, this code:

```
for item as System.Int32 in myarray:  
    System.Console.WriteLine(item)
```

is transformed into this:

```
__iterator1 = myarray.GetEnumerator()  
while __iterator1.MoveNext():  
    item = __iterator1.get_Current()  
    System.Console.WriteLine(item)
```
