

Git - Committer Access

Overview

As always, [Xircles](#) has the correct repository access information.

You should use it to get started - browse to the project you're interested in, then click "Repos" on the left hand navigation, then select the Git repository you wish to use.

SSH requirement

Committer access require a valid **SSH DSA2** key which you can generate using `ssh-keygen -t dsa`.

A RSA/RSA2 key won't work. You've been warned.
