

Cargo Gradle plugin

Hi Cargo and Gradle lovers

A while ago Ben has released the first version of the [Cargo plugin for Gradle](#).

The plugin provides deployment capabilities for web applications to local and remote containers in any given [Gradle](#) build by leveraging the [Cargo Ant tasks](#). It extends the [Gradle War plugin](#).

The plugin provides most of the functionality you might know from the Cargo Maven plugin or the Ant tasks; in fact internally it uses the Cargo tasks.

Any feedback is highly welcome and Ben announced he would love to improve the plugin to support all the functionality you were used to from other Cargo integrations. Please have a look at the [README file](#) for the current functionality.

Enjoy!
