

CARGO 1.1.1 is here!

Hi CARGO enthusiasts;

CARGO 1.1.0 has been out for just over a month now, and we have had important bug fixes and improvements since. We therefore are very happy to announce CARGO 1.1.1.

Wonder what has changed? Here is a short list:

- A certain number of user inquiries made us realize that there has been a confusion around the `wait` parameter of the start ANT task and Maven goal of CARGO. Indeed, most other similar tools have a clearer separation:
 - A "run" task/goal, which starts the container and waits until the user decides to stop it.
 - A "start" task/goal, which starts the container and hands over to the next task/goal (run integration tests, for example).
 - With version 1.1.1, CARGO also implements that behaviour.
 - Of course the `wait` parameter remains available AND will remain so until CARGO version 1.3.0 at least.
- The various installers (introduced with CARGO 1.1.0) now have homogeneous parameters and default values.
- Fixes and improvements on various containers:
 - The JBoss remote deployer now supports a wider range of configurations.
 - Jetty 7.x and Tomcat 7.x remote deployers are now better documented to avoid some mistakes.
 - Various improvements on the JOnAS containers:
 - Added datasource support on JOnAS 4.x and 5.x.
 - Added extra classpath support on JOnAS 5.x.
 - Added undeploy and redeploy capabilities to the JOnAS 5.x local deployer.
 - The `webapp` directory of Tomcat containers is now configurable.

And, the full changelog:

Fixed bugs:

- [CARGO-974] - default extraction dir for artifactInstaller is different from zipUrlInstaller
- [CARGO-978] - Broken link in site (Local Container)
- [CARGO-983] - cargo-jetty-7-and-onwards-deployer fails perform remote deploy on jetty-hightide (Jetty@Codehaus)
- [CARGO-984] - Remote redeploy does not work for Tomcat 7
- [CARGO-992] - Jonas 5.2: "mvn cargo:redploy" don't work with the local deployer

Improvements and new features:

- [CARGO-973] - Add support for extractDir to artifactInstaller
- [CARGO-979] - Allow specifying the profile name when remotely deploying to a JBoss 5.1.X-server
- [CARGO-981] - Configuring Tomcat webapps Dir
- [CARGO-985] - Implement cargo:run
- [CARGO-989] - Implement run task
- [CARGO-994] - Add datasource support to JOnAS
- [CARGO-995] - Add extra classpath support to JOnAS 5.x

Other changes:

- [CARGO-987] - Deprecate cargo:start's -Dwait argument
- [CARGO-990] - Deprecate the ANT start task's wait argumen

Enjoy!
