

# Google Summer of Code 2009

Google's Summer of Code is on again - <http://code.google.com/summerofcode.html>

See [Google Summer of Code Ideas](#) for project ideas

## Guidelines

### Administrative

- All Codehaus projects may register their desire to use a SoC student.
- In the event that Codehaus does not receive enough slots for all projects, projects will be cut first by the projects themselves, and then failing that, by the Codehaus despots.
- Projects should be useful and required
- Projects must have specific deliverables
- Codehaus gets the \$500 to cover our server infrastructure costs - the global financial crisis has smashed ad-revenue

### Recommendations - administrator ([Ben Walding](#)) enforced

- Weekly status updates ([The Rules](#))
- Respond to reasonable information requests

### Recommendations - mentor enforced

- Choose projects that have definable limits that can realistically be met
- Documentation and code quality are part of the success criteria
- If it doesn't build on completion; they don't get paid
- They should attempt to build community - although will be hard in limited time

## Timeline

TBA

## Projects
