

Haus News

What is Haus News?

Currently, Haus News is the blog located at the front of <http://blogs.codehaus.org/>. Once Confluence supports categories, we'll probably retire [MovableType](#) entirely. But until then, we're stuck with it.

When would I use it?

When you make a release, specifically. If you post a blog entry to the **Releases** category, it'll appear on [Releases](#) and also be aggregated on [JavaBlogs](#). It'll also appear on the front-page of the [HAUS](#) site.

How do I use it?

You need to [activateblogaccount](#) and then surf to <http://blogs.codehaus.org/mt.cgi> and login. Should be self-explanatory after that.
