

tapestry-security 0.4.0 released!

You've spoken and we aim to please! In tapestry-security 0.4.0 we did away with the shiro.ini and allowed configuring security Tapestry-style with all-in-Java contributions. The release finally combines all features from separate Shiro integrations (original tapestry-security by Kalle Korhonen) and tapestry-jsecurity (originally by Valentin Yerastov). We'll be adding a few signatures in minor revisions, but the interfaces are already stable and the release is fully integration tested against T5.2.5. Among other improvements are some performance enhancements: processing Shiro filter chains should be much quicker with 0.4.0. More information at [tapestry-security guide](#).

Release notes:

Improvement

[TYNAMO-67](#) - Allow contributing new security filters

New Feature

[TYNAMO-76](#) - Re-write the built-in Shiro filters as Tapestry filters

Enjoy!

Tynamo Team
