

Quick Start Guide

On Ubuntu,

```
apt-get install mercurial ant gcc g++ gcc-multilib g++-multilib
```

Then check your Java version. If you are using JDK 7, either ensure you are building a Jikes RVM version $\geq 3.1.3$ or switch to JDK 6.

Then,

1. hg clone <http://hg.code.sourceforge.net/p/jikesrvm/code> jikesrvm
2. cd jikesrvm
3. bin/buildit localhost prototype-opt # Change this to select appropriate configuration
4. ./dist/prototype-opt_\$(uname -m)-linux/rvm -version # Change dir to use selected host and configuration
