

Triple Quoted Strings

Triple quoted strings in Boo are used to preserve spacing and linebreaks without a thick slathering of `\n`'s all over your precious code.

It is good for visually representing XML, for instance:

```
xml = """
<xml>
  <randomElement>
  </randomElement>
</xml>
"""
```

It is also most excellent for formatting console output:

```
name = prompt("Name: ")
age = prompt("Age: ")
sex = prompt("Sex: ")

print """

Hello, ${name}!

My name is Hal, and I will be your Operating System today.

My sensors indicate that you are a ${age} year old ${sex}

If you need any assistance navigating this user interface, please ask.

...

Humans are so fragile...

"""
```
