

# Ruby

## Stomp client for Ruby

Here's the Ruby client for Stomp, written by Brian McCallister, now maintained by Johan Sørensen:

Package: <http://rubyforge.org/projects/stomp/>

Source: <http://gitorious.org/stomp>

## Gem

Stomp is also available as a ruby gem:

```
gem install stomp
```

## ActiveMessaging

If you are working with [Ruby on Rails](#) then you really should check out [ActiveMessaging](#) more details on the [Wiki](#).

ActiveMessaging (or a13g for short 😊) brings the power of Stomp to the Ruby on Rails world in a similar way ActiveRecord did for databases.
