

Howto release a snapshot

How to release a snapshot

Prerequisites:

- Install JDK 5 and let **JAVA_HOME** environment variable point to it.
- Enable access to the Codehaus Nexus repository as described at [Howto configure maven release settings](#).
- Once configured, make sure that you check out a fresh copy of Castor from SVN.

Steps:

To deploy a snapshot release, simply execute:

```
> mvn clean deploy
```

Checks:

After successful build, check that the new snapshot is available under <http://nexus.codehaus.org/snapshots/> .
