

Geotools basic Symbol libraries

This section is an attempt to build a basic library used as reference by the geotools community ; inputs still needed!!!

The procedure we could follow is the following :

1) define the categories we want to use

- Towns
 - roads
 - buidings
- Water
 - rivers
 - lake
- Lanscape
- Military
- ...

2) Define for each category the symbols we want

-> buildings : church, hospital, ...

3) for each symbol define :

- the graphical symbol used with a picture
- the name
- the ressource where we can find it (for instance a font file, an image, ...)
- a gif, png image to be used into GUI
- * ...

4) provide for each symbol the SLD file which could be used

5) provide a .zip with all these data

6) provide a tool if possible to help creating new symbols
