

Howto configure maven release settings

Howto configure maven release settings

To be able to build and deploy any new Castor release, you first have to add the credentials for Codehaus Nexus access to your Maven settings. To do so, please add the following <server> definitions to your **settings.xml** file under **.m2** subdirectory of your home directory.

settings.xml

```
<settings xmlns="http://maven.apache.org/SETTINGS/1.0.0"
          xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
          xsi:schemaLocation="http://maven.apache.org/SETTINGS/1.0.0
http://maven.apache.org/xsd/settings-1.0.0.xsd">
  ...
  <servers>
    <!-- Codehaus -->
    <server>
      <id>codehaus-nexus-snapshots</id>
      <username>username</username>
      <password>password</password>
    </server>
    <server>
      <id>codehaus-nexus-staging</id>
      <username>username</username>
      <password>password</password>
    </server>
    ...
  </servers>
</settings>
```

You have to replace *username* and *password* with your Xircles account data.
