

## 2.6.5

GeoTools 2.6.5 was created on August 8th, 2010:

- [geotools-2.6.5-bin.zip](#)
- [geotools-2.6.5-project.zip](#)
- [geotools-2.6.5-doc.zip](#)
- [geotools-2.6.5-welcome.zip](#)

New features for this release:

- Support for "Units of Measure" when drawing allowing symbol size or line width to be supplied with real world units such as 10km.
- DataStore implementations can now allow users a chance to specify their own FeatureID (used to supply your own primary key value when adding information to a database)
- Bridge to JFreeChat allowing JFreeChat to offer simple plotting of Geometry

Highlights:

- Reorganised website documentation with both stable and development javadocs available
- Reorganised website documentation with both stable and development sphinx available
- Coordinate Reference System definitions are now provided by EPSG Database 7.5 (when working with epsg-h2 or epsg-hsql)
- Improvements to rendering symbols: correct handling of DPI parameter, fixes when working with SVG symbols,

This release is made in conjunction with uDig 1.2.0.
