

LangBridge Plugin

Description

The LangBridge plugin enables compiling commons Java/Groovy sources ahead of every other source available on a Griffon application. This allows other JVM lang plugins (like Clojure, Scala and JavaFx) to implement/reference a common interface or POJO.

Installation

The current version of **griffon-lang-bridge-plugin** is **0.4.2**
To install just issue the following command

```
griffon install-plugin lang-bridge
```

Usage

Upon installation the plugin will generate a directory at `$appdir/src/commons`, you can place the common code there. Compilation of that code is guaranteed to be done before any other compilation happens. However you may compile that code manually by invoking

```
griffon compile-commons
```

History

Version	Date	Notes
0.4.2	03-29-11	Release sync with Griffon 0.9.2
0.4.1	08-24-10	Avoid overwriting default target accidentally
0.4	07-22-10	Release sync with Griffon 0.9
0.3	03-01-10	Upgraded to Griffon 0.3
0.2.1	11-17-09	compile-commons script should work with help command now
0.2	07-28-09	Renamed <code>\$appdir/src/interfaces</code> to <code>\$appdir/src/commons</code>
0.1	07-28-09	Initial release
