

Custom Error Messages

FEST Assertions Module has moved to Github !

Check this page :<https://github.com/alexruiz/fest-assert-2.x/wiki>

The documentation below is for Fest 1.x which is no more maintained, we are focusing our effort to the 2.x version !

Starting with version 1.2, FEST-Assert supports custom error messages, replacing the default ones.

For example, the following assertion:

```
assertThat("Luke").isEqualTo("Yoda");
```

will fail with the following default message:

```
expected:<'[Yoda] '> but was:<'[Luke] '>
```

By using the method `overridingErrorMessage(String)` we can provide our own error message. From the previous example:

```
assertThat("Luke").overridingErrorMessage("'Luke' is not 'Yoda'")  
                    .isEqualTo("Yoda");
```

will fail with the message:

```
'Luke' is not 'Yoda'
```
