

Release notes for Maven2 plugin 0.1

This is the initial release of the plugin. It depends on Cargo 0.7.

Installation

The only installation required is to point Maven2 to the Cargo Maven2 repository on Codehaus. There are 2 ways to do that:

- Modify your `setting.xml` and add the following `<profile>` element:

```
<profiles>
  <profile>
    <id>cargo</id>
    <pluginRepositories>
      <pluginRepository>
        <id>cargo m2 release repository</id>
        <name>cargo m2 release repository</name>
        <url>http://cargo.codehaus.org/dist2</url>
        <releases>
          <enabled>true</enabled>
        </releases>
        <snapshots>
          <enabled>true</enabled>
        </snapshots>
      </pluginRepository>
    </pluginRepositories>
  </profile>
</profiles>
<activeProfiles>
  <activeProfile>cargo</activeProfile>
</activeProfiles>
[...]
```

- Modify your `pom.xml` and add a `<pluginRepository>` element:

```
<pluginRepositories>
  <pluginRepository>
    <id>cargo m2 release repository</id>
    <url>http://cargo.codehaus.org/dist2</url>
    <releases>
      <enabled>true</enabled>
    </releases>
  </pluginRepository>
[...]
```

Usage

Check the [plugin documentation page](#) for how to use the plugin.

Requirements

- [Maven 2](#)

Implemented issues

com.atlassian.confluence.macro.MacroExecutionException: JIRA project does not exist or you do not have permission to view it.
