

# ChmodInstallerListener

This Listener is not functional yet!

This listener does set the file and directory permissions during installation. For this purpose, you must apply the nested `<additionaldata>` element to a pack's `<file>`, `<fileset>` or `<singlefile>`.

Attribute	Description	Value range
key	An action key to apply	<code>permission.dir</code>   <code>permission.file</code>
value	A value to the above action key for specifying how to apply the particular action.	Integer If the value begins with "0", it is interpreted as an octal number, otherwise as a decimal number representing the chmod-compatible permission on the appropriate files when the listener is executing during the installation.

This listener must be used in combination with the [ChmodCompilerListener](#).
